Problem Statement

The gap we're solving

AtliQ's founder-led sales team has no reliable way to capture and act on what clients say. Leads, promises and cross-sell signals stay in inboxes and notes and never reach Kaizen CRM, so follow-ups slip, cross-sells go unnoticed and lost deals are never revisited. Evidence: none of the 40 CRM records has a next follow-up date, 5 prospects were never entered, 2 accounts are duplicated, and the $95K FinEdge deal waited 3 weeks for a reply. Root cause: keeping the CRM current depends on manual effort at the worst moment — "update the CRM same-day" was agreed in April and again in July.

Current State

Map the process as it works today

Input	Action By Human	Action by Digital Tool	Platform in Use	Associated Pain Points	Current Solution
Emails, calls, meeting notes, phone scribbles	Founders read threads between meetings	Email and calendar tools	Gmail, often on the phone	Context scattered; CRM never sees emails	Founders read and remember
Customer requirements and objections	Scribble notes, type up later (or never)	Notes and spreadsheets	Notes, scribbles, spreadsheets	Manual notes take time; context fades	Ad-hoc notes; needs get lost
Leads: referrals, LinkedIn, conferences	Spot leads in inbox; cards left in a drawer	Email inbox and referrals	Email, website, LinkedIn leads	5 leads never entered; 4 of ~15 cards	Leads spotted by chance
Promises, next steps and due dates	Remember follow-ups; often no owner	Calendar and task reminders	Calendar / task app	0 of 40 records have a follow-up date	Monthly pipeline review finds gaps late
Deal stage and value changes	Update CRM days later, if at all	CRM forms and reports	Kaizen CRM	CRM stale: $95K FinEdge last contact March	'Update CRM same-day' rule (failed twice)
Customer and contact updates	Reconcile CRM vs inboxes by hand (~2 hrs)	CRM contact records	Kaizen CRM (no API)	2 accounts duplicated (Meridian, GlobalMart)	Manual CRM data entry

AI-Generated Solution

Atliq Sales and CRM Assistant: AI does the remembering, code does the checking, founders do the deciding

Input	Action By Human	Action by Digital Tool	Platform in Use	Pain Points with New Solution	Guardrails & Risk Mitigation
Emails, meeting notes, Quick Capture notes	Act on the ranked Daily Brief	Summarize and log interaction (auto)	Dataset + Quick Capture (Gmail later)	Hallucinated or missed context	Quote verified word for word (99%)
Client asks, needs and objections	Answer clarification questions	Extract facts, each with a source quote	gpt-6-luna structured output	Wrong extracted details	Unclear? Ask a founder, write nothing
Leads, referrals, cross-sell signals	Approve new leads (5 found)	Match to Kaizen: email, domain, name	Code: quote check + record matching	False-positive leads or cross-sells	Show evidence; founder approves leads
AtliQ promises, owners, due dates	Mark promises done	Extract promises, asks and due dates	Rules engine builds Daily Brief	Ambiguous owners or dates	Never emails clients; due date rule
Kaizen CRM records (40)	Approve status, value, owner, follow-up	Propose field changes for approval	Kaizen working copy (no API)	Wrong CRM update (e.g. Won to Contacted)	Status never moves back; contacts fill blanks
Account timeline and stakeholders	Approve duplicate merges	Kaizen import file + audit log	Audit Log with undo + CSV export	Prompt injection and privacy risks	Redaction, no delete, roles, undo
